

## The best “Free” MARC 21 cataloging utility in the Industry!

eZcat, a feisty cataloging tool from Book Systems, really hits the MARC! With just a few swipes of your mouse, it goes to work grabbing current, *free*, and unlimited MARC 21 records available via the Internet. eZcat is a powerful Z39.50 cataloging tool that allows users to retrieve free MARC 21 records from the Library of Congress and over 600 major universities and public libraries.

Search by one or several criteria including ISBN, LCCN, author, title, series title, or more.

eZcat simultaneously searches one or many connected Z39.50 servers instantly and thoroughly.

With the professional version of eZcat, you can perform full MARC 21 editing, including adding and removing tags, prior to saving the record for use in your library automation program.

eZcat even supports most barcode readers capable of recognizing ISBN barcodes. Eliminate keystrokes by scanning the number into the search data.

### Change the way you pay for cataloging

No more per-record fees. No more out-of-date CDs. No more on-line subscriptions. eZcat is a one-time software purchase that pays you back in both saved time and money. The savings increase every time you use it! Cut retrospective conversion time, enhance bibliographic records with notes, summaries, etc. or even use it as a reference tool to review items you are considering purchasing.

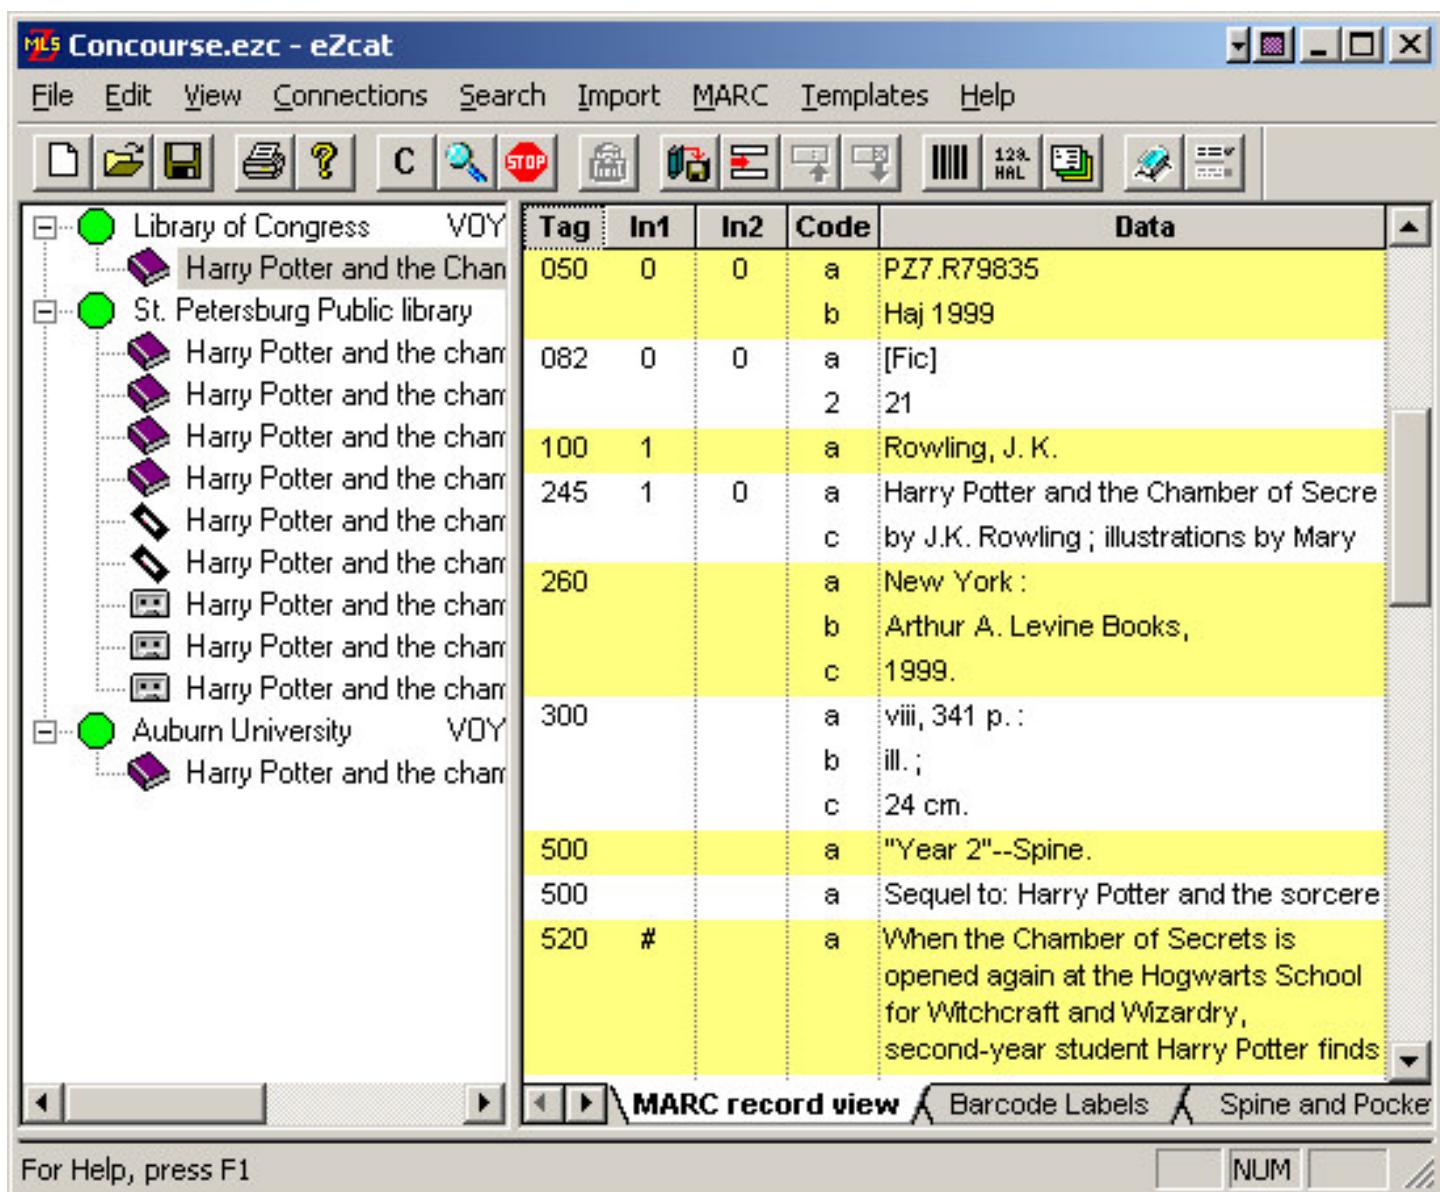

### Complete compatibility

eZcat works with any automation system that imports MARC 21 records. Users of Book Systems' *Concourse* receive an immediate benefit of being able to drop MARC 21 records directly into their cataloging screen for increased speed and ease-of-use. Order your copy today...eZcat really hits the MARC!
